Social Life Cycle Assessment— The Implementation in Different Sectors

Message from the Guest Editors

The social impact generated by product along its life cycle has gathered interest recently. In several sectors, the interest of media on the social supply chain risks has been risen. On one hand, several methods have been developed to support companies and NGOs in identifying the social risk along the supply chain. On the other hand, these approaches trace the risks, but they can not measure the added value nor the negative social impact generated by a product along its life cycle. Indeed, in regions where bad working conditions occur, a company which invests in its human resources and supports its employees should receive a positive reputation, or at least have the chance to get a major visibility in the market among consumers. A methodology to measure the social performance is S-LCA. The first guidelines published by UNEP in 2009 are now under revision. The last decades have seen a proliferation of implementations in several sectors but an harmonized methodology has not been reached. The main goal of this SI is to define the current state of the art of S-LCA and social impact assessment methodologies implemented in different sectors towards a more sustainable way of production.

About the Journal

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Editor-in-Chief

Prof. Dr. Benjamin McLellan
Graduate School of Energy Science, Kyoto University, Yoshida-honmachi, Sakyo-ku, Kyoto 606-8501, Japan

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1
(Nature and Landscape Conservation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 33.4 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the first half of 2024).
