

## Special Issue

# Using Vis-NIR Spectroscopy for Predicting Quality Compounds in Foods: 2nd Edition

### Message from the Guest Editors

The development of affordable and more reliable methods of controlling the quality of food and managing crops is imperative in order to maximize productivity and profitability and to minimize the environmental impacts of agriculture. Visible and near-infrared (VIS-NIR) spectroscopy has contributed to enhancements in the control of food quality by offering the potential to probe the internal quality of fresh fruits, vegetables, cereals, and other edibles. In this Special Issue, original research articles and reviews on the application of VIS-NIR spectroscopy in the control of food quality are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Analytical) / CiteScore - Q1 (Instrumentation)
