

## Special Issue

# Human Signal Processing Based on Wearable Non-invasive Device

### Message from the Guest Editors

There are many different types of human signals, such as the photoplethysmograms, electrocardiograms, electromyograms, electroencephalograms and electrooculograms. These human signals play an important role in the diagnosis of disease. However, the workloads of medical personnel for interpreting these signals are colossal. In order to address this issue, automatic human signal processing is required. To process these human signals, signal denoising, feature extraction and classification or regression are usually required. To perform denoising, time frequency analysis approaches such as wavelet transform approaches, empirical mode decomposition approaches and singular spectrum analysis approaches are employed. To perform feature extraction, statistical approaches are employed. To perform classification or regression, neural networks or tree-based systems are employed. This Special Issue mainly focuses on proposing new methods for carrying out human signal processing and exploring new applications using human signal processing techniques.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Analytical) / CiteScore - Q1 (Instrumentation)
