

## Special Issue

# Single Sensor and Multi-Sensor Object Identification and Detection with Deep Learning

### Message from the Guest Editors

Deep learning has become popular in object detection and recognition. While many works have been dedicated to computer vision based on camera, there have been improvements in developing deep learning-based detection and identification for other sensors such as radar, infrared (IR), lidar, hyperspectral and RGB-D sensing. Besides single sensor or multi-sensor object detection, multi-sensor identification and multi-modal deep learning are of great interest to enhance the detection and recognition performance. This Special Issue calls for original and novel object detection and recognition methods based on deep learning for single sensor and multiple sensors.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Analytical) / CiteScore - Q1 (Instrumentation)
