Human and Animal Motion Tracking Using Inertial Sensors II

Message from the Guest Editor

Due to the versatility of inertial sensors, measurement sessions can now easily be conducted outside the laboratory, for example, at the workplace or in field studies. They also allow for sessions of either a very short duration, such as shock and crash situations, but also for sessions lasting several days, as in the case of monitoring of physical activity. Inertial sensors can be used as single sensors or inertial sensors networks allowing to record kinematics or dynamics of either a single anatomical segment, the upper and lower limbs, or even the full body. This Special Issue would like to display innovative work exploring new hardware and software solutions deriving from inertial sensors related to human or animal motion. The particular topics of interest include but are not limited to:

- Sensor calibrations and registrations on anatomical body;
- Methods to determine anatomical orientations and translations;
- Management of errors, bias, drift of the inertial sensors;
- Clinical applications;
- Ergonomics applications;
- Sports application;
- Quantification of physical activity.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Analytical) / CiteScore - Q1 (Instrumentation)
