Special Issue

Sensitivity Enhancement Approaches to the Separation Techniques for Pharmaceutical Analysis and Therapeutic Drug Monitoring

Message from the Guest Editors

Several separation techniques are available for pharmaceutical and biomedical analysis, but when these techniques are utilized alone, where it is essential to quantify the analytes at the lowest possible concentrations, the success rates are not very encouraging. This could imply that even robust routine separation techniques that provide reliable specificity and validity at the usual working concentrations can fail at low concentration levels of pharmaceuticals. This poses significant problems for investigating product purity and drug monitoring in bio-fluid samples. Sensitivity enhancement approaches are consequently required to maximize the performance of separation procedures. This issue focuses on potential strategies for enhancing sensitivity as they can be applied to current separation techniques for pharmaceutical analysis and therapeutic drug monitoring.

About the Journal

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Editor-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
