Determination of Potentially Toxic Elements in Food, Beverage and Medicinal Plants by Analytical Methods and Separation Technologies

Message from the Guest Editors

Potentially/presumably toxic elements (PTE) are emitted into the environment by natural and anthropogenic processes. Their release leads to their accumulation in food products and medicinal plants, and this may have a negative impact on human health. In this context, it is important to develop methodologies for PTE determination in different food products, the monitoring of their content in regions with different levels of anthropogenic pollution, and assessments of the potential risks for human health. This Special Issue aims to collect studies that show the progress in analytical techniques applied for food analysis. The contributions (original research papers and review articles) may present examples of analytical technique applications for the determination of the food elemental analysis, as well as risk assessment studies.

About the Journal

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Editor-in-Chief

Prof. Dr. Frank L. Dorman

USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
