

## Special Issue

# Preconcentration Methods for the Analysis of Trace Elements and Their Species in Environmental Matrices

### Message from the Guest Editor

The aim of this Special Issue is to collect recent advances in the use of preconcentration and separation methods for the determination of trace elements and their species in environmental matrices. Papers on the use of novel modified nanomaterials and other preconcentration substrates for multi-elemental analysis are particularly welcome. We also hope to receive papers on elemental speciation, either using chromatography or other separation methods.

## About the Journal

### Message from the Editor-in-Chief

*Separations* offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).

#### Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
