

## Special Issue

# Adsorption of Emerging Water Pollutants by Advanced Materials

### Message from the Guest Editor

Over the years, many novel adsorbents derived from agricultural materials, highly porous and nano-structural materials have been developed and applied to remove toxic pollutants from a wide range of environmental matrices. The ease of synthesis/preparation of these novel adsorbents makes them economically viable and cost effective. Undoubtedly, the applications of these novel materials in a wide range of environmental remediation will play a pivotal role towards achieving the Sustainable Development Goals of Good health and Well-being and Clean Water and Sanitation.

## About the Journal

### Message from the Editor-in-Chief

*Separations* offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).

#### Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
