Cardiothoracic Surgery

Message from the Guest Editors

Cardiothoracic procedures are often lifesaving operations. There are effective treatments, including transplantation, for almost all cardiac and thoracic diseases that can be performed with a low risk of morbidity and mortality. Cardiac surgeons are commonly challenged with weighing the potential risk and the potential benefit of a surgical procedure. It is our privilege to invite experts in the field to share their expertise and submit new ideas and cutting-edge research to this Special Issue.
