Harnessing Biological and Abiotic Solutions for Enhanced Productivity and Phytochemical Profile of Plants

Message from the Guest Editors

Growing plants with the addition of biological (microorganisms, plant extracts) and/or abiotic (inorganic chemical-based) solutions is a sustainable way to enhance the productivity and phytochemical profile of plants that could be used in human nutrition or for the production of plant-based dietary supplements. This Special Issue focuses on harnessing biological and abiotic solutions for enhancing the productivity and/or phytochemical profile of plants. The goal is to gain an insight into changes in the nutritional value and biological activity of plants that are exposed to biological and/or abiotic solutions and are used in human nutrition. Original research articles and reviews are welcome to be submitted.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
