

Special Issue

Groundwater Hydrology, Contamination, and Sustainable Development

Message from the Guest Editors

The need for all humans to have access to clean water is paramount and forms a critical aspect of daily life. This was enshrined as part of the Sustainable Development Goals (SDGs). Researchers have been monitoring and assessing groundwater occurrence and distribution, groundwater quality and groundwater vulnerability, and developing innovative ways of solving groundwater pollution challenges. Several technological- and mathematical-based techniques can be used. Intelligent systems are also reliable tools that can be employed. For decades, various geospatial (remote sensing and geographic information system (GIS)), artificial intelligence (AI), machine learning (ML), statistical, and indexical methods have been proposed and applied by numerous researchers in the field of hydrogeology and environmental water quality. Most previous research outputs uphold that these methods have been very useful in interpreting groundwater hydrology and groundwater quality data. The application of integrated methods for groundwater hydrology, environmental contamination and water quality research is of the utmost significance when actualizing many environmental sustainability goals.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
