

Special Issue

Advanced Materials in Sustainable Infrastructure

Message from the Guest Editor

Sustainable infrastructure ensures long-term economic, social, environmental sustainability together with climate resilience over the entire infrastructure life cycle, from planning and design, to construction and operation, to decommissioning. Significant investment in infrastructure is required to meet the Sustainable Development Goals by 2030 and net zero emissions by 2050. Construction materials have a key role in sustainable and resilient infrastructure while infrastructure projects also play a key role in circularity in construction. Engineering innovation promotes new and sustainable materials, green infrastructure and nature-based solutions, which in turn support society's resilience to climate change. This Special Issue will review key innovation in the development, application and monitoring of advanced materials and cement-composite materials and structures for sustainable and climate resilient infrastructure. For this Special Issue, you are invited to propose solutions through advanced material engineering for sustainability and resilience in infrastructures, promoting low-environmental-impact, circular solutions and high performance.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
