# Future Prospects of BIM Management for Sustainability in Smart Built Environment

### Message from the Guest Editors

Over the last several decades, a considerable number of sustainable design and construction approaches for AEC projects have been developed across the globe, using a wide range of technologies, tools, and techniques, such as BIM, to accomplish their objectives. BIM as a system is still in its early stages, and solutions in the industry are constantly evolving to meet the distinctive needs of their users. As technology has advanced in recent years, the use of BIM has proven to be an innovative, useful, and effective factor in the development of sustainable projects, particularly in the processes of designing systems, and, more recently, optimizing them from a life cycle perspective. Some of these technologies are Reality Capture technologies, Digital Twins and others. For the foreseeable future, the emphasis of research will be on investigating the potential of BIM management for sustainability in the smart built environment and making BIM-based technologies, workflows, and tools more adaptable to the creation of a sustainable built industry. This entails a wide range of study areas embedded within the process of planning, design, construction, and maintenance.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
