

## Special Issue

# Hydrology, Geochemistry and Water Resource Management

### Message from the Guest Editors

Water resources are crucial for the survival of all living beings on earth and play an essential role in any country's economic development. At present, natural, climatic and several anthropogenic activities (i.e., mining, rapid urbanization, industrial and domestic waste disposal, agriculture practice, sewage and effluent discharge, overexploitation of groundwater, etc.) are responsible for water depletion and contamination across the globe. Therefore, awareness, regular water monitoring, geochemical assessment, contamination identification and appropriate treatment, vulnerability mapping, artificial recharging, coastal aquifer protection, and new technologies are required for water resources management. Thus, the current Special Issue is going to cover areas of the water crisis and management, such as:

- Renewable energies to manage water scarcity;
- Appropriate and cost-effective treatment methods;
- Planning of public infrastructure to water issues;
- Hydrogeochemistry and source of contamination identification;
- Climate change, water shortage and economy;
- Aquifer vulnerability and contaminant transport modelling;
- Role of remote sensing and GIS.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
