

## Special Issue

# Green Supply Chain and Sustainable Operation Management

### Message from the Guest Editors

Sustainable development encompasses both environmental and social impact factors. Developing strategies to effectively connect supply chain and operations management to sustainability has earned increasing attention from both researchers and practitioners. In this context, we encourage the innovative study of green supply chain and sustainable operations management from any perspective of the supply chain process (e.g., green supply structure design, green product design, green marketing, recycling, and remanufacturing). We particularly expect studies that pay attention to business model innovation and cooperation mechanism innovation related to green supply chain and sustainable operations management. Yet, we also encourage interdisciplinary studies, especially those that connect with data-driven and digital revolution technologies (e.g., the application of big data analysis, cloud computing, and blockchain in green supply chain and sustainable operations management).

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
