

## Special Issue

# Sustainable Education and Technology Development

### Message from the Guest Editors

In recent years, E-learning combined with new information technology to enhance learning effectiveness has become an important international research issue under the epidemic. E-learning or distance learning have become major learning platforms via integrating new technologies such as artificial intelligence, AR/VR, emotion technology, and metaverse to cultivate sustainable education. More research will help in the development of E-learning with educational technology. The successful implementation of these digital technologies will influence the learning performance, motivation, and engagement for sustainable education. Blockchain technology and non-fungible tokens (NFT) also provide chances for new development for design thinking, fashions style, creative thinking, education authorization, STEAM education, maker, innovation, and entrepreneurship. The aim of this Special Issue is to explore the educational applications of applying new technologies such as AI, metaverse, AR/VR, blockchain, and NFT to improve the learning performance of sustainable education/E-learning. We look forward to receiving your contributions.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
