

## Special Issue

# Digitalization of Urban Freight for Improving Sustainability and Livability

### Message from the Guest Editors

The increasing impact of freight transport on people's quality of life has led to a growing need for digitalization of urban freight, in order to minimize negative societal and environmental impacts. Policy makers are increasingly recognizing the importance of sustainable freight mobility in addressing environmental issues. As such, there is a pressing need for knowledge and assessment of the sustainability of emerging trends and technologies in the mobility sector. This Special Issue will feature papers that explore various aspects of sustainable urban freight transport and liveability solutions in urban areas. Authors are encouraged to examine the environmental impacts of dynamic urban logistics, the use of electro-mobility in city logistics, Urban Freight Transport Resilience, logistics impact assessment on livability, public-private partnerships for sustainable urban logistics, and safety considerations in urban freight transport. Special attention will be given to platform-based management, physical internet, digital twin for urban freight, and sustainable urban transport policy through digital decision making.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
