The Provision of Ecosystem Services in Response to Habitat Change

Message from the Guest Editors

Anthropogenic landscapes, along with human affected, transformed and intentionally created habitats, are expanding and tend to cover more land. Together with these alternations, the ecosystems functioning in the densely populated environmental mosaic are changing. At the same time, the demand for ecosystem services is increasing proportionally to the growth of human population, and the decrease of the natural environment, due to global changes of the Anthropocene. Among the anthropogenic ecosystems, there are many that present features of novel ecosystems (NE). From a scientific viewpoint, the biological nature of the mechanisms of the novel ecosystems functioning is almost not known. The human population is facing the perspective of more than half of the terrestrial ecosystem being anthropogenic ecosystems on one hand, and on the other hand, the dependence on ecosystem services provided by ecosystems of unknown functioning mechanisms. The outline and scope of this collection should be, at least, to define what we do not know about the basis (ecosystems services) of human population in the future.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
