Soil and Water Management Challenges & Solutions for Sustainable Agriculture under Climate Change

Message from the Collection Editor

Terrestrial agroecosystems are dominant food generators and pivotal utilizers of the most valuable Earth's resources, notably quality waters and soils, which have been exposed to various anthropogenic pressures for decades, constraining agri-food production. Consequently, a majority of arable pedosphere constrains (salinity/alkalinity, acidity, nutrient deficiency, contamination), and specific management strategies for their amelioration (leaching, drainage, liming, fertilization, bioremediation) are closely linked to appropriate water management in the (sub)surface soil (root) zone. However, optimizing water relations in the arable pedosphere is becoming increasingly challenging due to global climate change and variability. Modern sustainable strategies and approaches to ameliorate suboptimal water conditions (mostly insufficient supply, but waterlogging periodically as well) should be directed toward more efficient management of natural resources given strong competition among related stakeholders in agroecosystems (farmers, urban population, energy-producers).

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
