

## Special Issue

# Advanced Studies in Sustainable Food Engineering

### Message from the Guest Editor

Engineering applications in the food industry are interdisciplinary. Various aspects have to be taken into consideration. Such aspects include not only the technical variables but also the physiology of the products, their technological evolution, and their environmental and health and hygiene aspects. The general subject of this Special Issue will be to focus on the recent advancements in studies and technologies carried out and applied in the food industry, with particular reference to environmental, economic, energy, and sanitary sustainability. Therefore the goal is to foster the scientific sharing of experiences and ideas on fundamental and applied aspects of studies, analysis, assessment, and modeling in agro-food chains. Regarding sustainability, the scientific discussion will include the purification of wastewater, the recovery of energy and by-products, and health and safety at work.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
