

## Special Issue

# Sustainability in Soil Remediation

### Message from the Guest Editors

The special issue “Soil remediation and sustainability” is devoted to the theoretical foundations and practical methods of contaminated soils remediation. The issue aims to provide a unique possibility to share studies, experience and perspectives in these main topics:

- Mechanisms of interactions between organic and inorganic contaminants and soil components,
- Effect of soil and environmental conditions on the mobility and bioavailability of toxicants,
- Innovative methods and technologies of soils remediation,
- Best Available Techniques (BAT) on polluted soils remediation,
- New efficient and environmentally friendly sorbents for the immobilization of various pollutants,
- The role of humic substances in the restoration of contaminated soils.

This issue is serving as a basis for future discussions on the problem of Soil Remediation and Sustainability. We hope that the methods and technologies described in this issue of the journal will be in demand by the business and authorities and widely implemented in practice of agriculture and environmental protection.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
