

Special Issue

Sustainable Environmental Engineering: Critical, Interdependent Infrastructure Sustainability and Resilience

Message from the Guest Editors

This Special Issue focuses on understanding and analyzing infrastructure systems and their interdependencies to guide sustainable and resilient design and management. Manuscripts may focus on the analysis of systems and/or systems of systems, with a particular emphasis on system interdependence and implications for sustainability and resilience.

Manuscripts may also focus on either generic or place-based solutions to wicked problems that may include considerations of culture, demography, geography, and social structures. Some types of questions that may be relevant to the theme of this special issue include: How can we think about the interplay of systems focused on provision of energy, water, food, transportation, and others? How might infrastructure systems be shaped by social systems, and how do they feed back to the society? What are and how do we manage the trade-offs among many different desirable ends involved with investment in different types of, or approaches to, infrastructure to meet human needs in various social and cultural settings?

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
