

## Special Issue

# Sustainable Practices in Food Systems

### Message from the Guest Editors

This Special Issue comprises original articles regarding the sustainable development and practice of technologies leading to reducing waste in consumer food systems, consisting of both the food supply chain and packaging materials from farm to retail. One of the fastest growing market segments is convenience ready-to-eat (RTE) food products in both hot and cold applications. Packaging comprises one of the largest plastic markets and is one of the major contributors to solid waste in landfills and marine environments in the United States. Additionally, food production (fertilizers, processing equipment, farm practices, etc.) accounts for nearly one third of global green house gas emissions. This places a heavy burden on brand owners, manufacturers, and consumers to consider end-of-life practices and purchasing decisions.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
