

Special Issue

Transition of Sustainable Agri-Food Supply Chains: Business and Governance Solutions from Agricultural Primary Production to Food Consumption

Message from the Guest Editors

Policy trends and changing demand patterns towards sustainability goals are putting pressure on the food system, including on the actors of the agri-food supply chain and on consumers. The aim of this Special Issue is to explore how agri-food value chain stakeholders and consumers trigger or adapt to the achievement of sustainability goals, including the analysis of connected policy frameworks and governance arrangements. Taking a multidisciplinary approach, articles may include the following topics: -Policy and transition dynamics for agri-food systems; -Circular economy and agro-ecological approaches in food supply chains; -Sustainable and innovative business models in food systems; -Evolving food consumption patterns in changing food systems; -Alternative Food Networks activities, impacts and sustainable performance; -Analysis and development of governance arrangements for agri-food value chains. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
