Assessing Ecosystem Services Applying Local Perspectives

Message from the Guest Editor

Ecosystem Services (ESs), or nature's services, play a vital role in supporting human well-being. This role is critical for Indigenous Peoples and Local Communities (IPLCs) as a significant part of their well-being is derived from the use and management of natural resources that people have rights and/or access to. Various ES approaches have been applied to assess this role. This Special Issue aims to highlight important innovative approaches that can be used by researchers/policy decision makers/government authorities to understand the role of ES in IPLCs' well-being. The main aims of this issue are:

- To highlight the innovative approaches that can be used to understand and evaluate links between IPLCs' well-being and natural resources;
- To suggest and underpin non-monetary values of natural systems for IPLCs;
- To inform policy decision-making and other relevant agencies about the value of IPLCs' connections with nature.

The listed keywords suggest just a few of the many possibilities. If you are uncertain about whether your paper fits into the scope of this Special Issue, please feel free to contact the .

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
