Studies on Green Agriculture for Sustainable Development: Cultivation Methodologies, Techniques and Improving New Varieties

Message from the Guest Editors

As it is known, agriculture production is similar to a factory working in atmospheric conditions. As a result, to adapt to the changing climatic conditions in terms of agriculture, it is necessary to breed new varieties that are highly tolerant to biotic and abiotic stress factors; to use new approaches and models that will adapt to possible changes in irrigation, fertilization systems and land plant use; to develop new perspectives on the fight against diseases, pests and weeds and the necessary infrastructure and research activities in these areas; and to increase financial support and national and international cooperation on these issues. Thus, realizing sustainable development has become a global priority in particular for agriculture. This Special Issue on “Green Agriculture for Sustainable Development: Cultivation Methodologies, Techniques and Improving New Varieties” will be a collection of primary research articles reporting hypothesis-driven investigations that provide new insights into sustainable agriculture and that determine productivity and properties for more exploitation.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
