

Special Issue

Environmental and Economic Optimisation of the Building Envelope for Different Climates

Message from the Guest Editors

This Special Issue aims to collect original research articles and reviews related to the environmental and/or economic optimisation of the building envelope for one or more countries or climate regions regarding the design of sustainable and energy-efficient buildings.

Both theoretical and real case studies can be considered. Research areas may include (but are not limited to) the following:

- eco-efficient building envelope alternatives that minimise the life cycle environmental impacts and costs;
- environmental and economic life cycle-driven design of the building envelope;
- optimisation of the environmental and/or economic performance of the building envelope using generic or tailor-made algorithms;
- contribution of local climatic conditions and construction practices to life cycle carbon footprints, as well as the embodied energy and costs of buildings;
- trade-off between life cycle carbon footprint, embodied energy, and costs in each local context; and
- influence of regional differences in optimal solutions for the building envelope.

We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
