

Special Issue

Sustainable Resilience in Green Supply Chain Management

Message from the Guest Editors

We propose this Special Issue intending to feature research on how firms can achieve sustainable resilience in green supply chain management. We welcome papers in this area that adopt a wide range of methods, including case studies, qualitative comparative analyses of multiple cases, various quantitative methods, etc. Green supply chain management has become one of the most important concepts in modern supply chain management, as the whole of society pays more and more attention to achieving sustainability in development. However, due to the COVID-19 pandemic, the global supply chains are now suffering from unprecedented severe challenges and uncertainties. The advancement of resilience is thought to be one possible solution for mitigating the increasing risk of disruption of global supply chains due to the COVID-19 pandemic. Novel theories and methods for supply chain resilience are needed in order to provide both managers and policymakers with qualitative and quantitative managerial suggestions. Thus, firms in the post-pandemic era should make efforts to facilitate sustainable resilience in green supply chain management.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen
