Urban Sustainability: Re-envisioning Cities to Lead the Way toward A Circular Economy

Message from the Guest Editor

Urban communities play a critical role in achieving sustainability overall. To date urban communities rely heavily on surrounding peri-urban and rural areas to sustain their highly concentrated levels of consumption and waste. Yet how can urban communities be more sustainable and reduce the burden they pose to their surrounding areas? The answer lies in re-envisioning our cities as circular systems that serve as exemplars of a re-embedded circular economy. This kind of circular economy takes its cue from nature rather than from industrial throughput models. This special issue explores the opportunities and challenges urban communities face, as they are re-envisioned as circular systems embedded in their diverse and complex social and environmental contexts. We invite contributions that envision sustainable solutions for urban infrastructure, food and water security, human services, ecosystems services, governance, and quality of life related arrangements that improve the sustainability and resilience of urban communities. About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
