Advance in Nonlinear Analysis and Optimization

Message from the Guest Editor

Nowadays, nonlinear analysis and optimization are very active research directions. We have variational inequalities, feasibility problems, numerical algorithms, discrete and continuous optimization, computer simulation, and applications to applied sciences in mind. We will invite contributions to this volume from leaders of these fields, with known results in mathematical analysis and optimization theory.

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.
