Reduction and Control of Indoor Air Pollutants in Public and Private Places

Message from the Guest Editors

Particulates, viruses, and VOCs are major pollutants in multiuse places that are known to be generated from various factors, such as human activities, cooking, and the inflow of outside air through the windows and ventilation systems. Epidemiological studies show that exposure to indoor air pollutants (IAP) is highly hazardous to the body since it raises the sensible pollution level and, along with it, is the possible occurrence of disease and death rates. As IAP concentrations measured in multiuse places are generally higher and more toxic than those in the air, they play a major role in deteriorating indoor air quality and as such require proper control. This Special Issue aims to focus on control technologies in indoor places such as public, private buildings, and multiuse facilities.

About the Journal

Message from the Editor-in-Chief

Toxics (ISSN 2305-6304) is an international, peer-reviewed, open access journal which provides an advanced forum for studies related to all aspects of toxic chemicals and materials. We aim to publish high quality work that furthers our understanding of the exposure, effects, and risks of chemicals and materials in humans and the natural environment as well as approaches to assess and/or manage the toxicological and ecotoxicological risks of chemicals and materials. Please consider publishing in *Toxics* when preparing your next paper.

Editor-in-Chief

Dr. Demetrio Raldúa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Toxicology) / CiteScore - Q2 (Chemical Health and Safety)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2024).
