Monitoring and Diagnosis of Invasive Fungal Infections

Message from the Guest Editors

The rise of invasive fungal infections in immunocompromised patients necessitates accurate and early detection for effective management. Timely diagnosis reduces unnecessary antifungal therapy, minimizes resistance development, and prevents severe consequences. However, diagnosing these infections is challenging, as traditional methods lack sensitivity and specificity, often leading to late detection. To address this issue, we welcome original and review articles on novel approaches to fungal identification, host immune responses, macromolecular antigen detection, fungal nucleic acid amplification, and fungal metabolite quantification. Join us in advancing the field of fungal infection diagnosis!

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.9 days after submission; acceptance to publication is undertaken in 4.8 days (median values for papers published in this journal in the first half of 2024).
