

## Special Issue

# Holistic Approach to Tuberculosis Detection, Treatment and Prevention, Volume II

### Message from the Guest Editors

Although it is mostly preventable and curable, approximately 10 million people develop tuberculosis disease, resulting in a million deaths every year globally. For the first time in several decades, we are on the brink of having a shorter treatment regimen for the treatment of drug-sensitive TB (DS-TB) and a novel TB vaccine that would prevent TB disease in adults. As we look forward to TB elimination and meeting TB goals, evidence-based approaches would be the key. This Special Issue on “Holistic Approach to Tuberculosis Detection, Treatment and Prevention, Volume II” invites submissions on evidence-based approaches to ending TB, including active case-finding approaches, TB preventive treatment, and a holistic biosocial approach to TB elimination with global relevance. A broad range of research methodologies will be accepted, including qualitative, epidemiology, operational, implementation, and policy research, as well as other relevant approaches.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

##### Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.2 days after submission; acceptance to publication is undertaken in 3.7 days (median values for papers published in this journal in the second half of 2024).
