Advances in Chagas Disease Control

Message from the Guest Editors

Chagas disease is an emerging and neglected tropical disease caused by the parasite *Trypanosoma cruzi*, which is estimated to infect 8 to 10 million people worldwide, according to World Health Organization. Despite being a zoonotic disease, transmission of the parasite can also occur through blood transfusion, organ donation, congenital infection and via the oral route, reinforcing its emerging character. The acute phase of the disease is relatively mild, but the chronic phase, occurring years after infection, may be responsible for severe manifestations, leading to disability and higher mortality rates. However, as a neglected disease, the only options for treatment nowadays are benznidazole and nifurtimox, both developed several decades ago, with questionable efficacy and high toxicity. In this regard, what can be envisioned in terms of Chagas disease treatment in the near future? This Special Issue intends to embrace the different aspects that may be explored with the intention of controlling Chagas disease, from the development of novel options for treatment and prevention to the repurposing of drugs and the discovery of novel cell targets.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.9 days after submission; acceptance to publication is undertaken in 4.8 days (median values for papers published in this journal in the first half of 2024).
