Emerging Vector-Borne Diseases and Public Health Challenges

Message from the Guest Editors

In recent decades, we have witnessed the emergence and reemergence of several vector-borne diseases, such as Zika, chikungunya, among others. These diseases have several etiological agents, which are transmitted to humans principally through arthropod vectors, principally insects and ticks. Vector insects comprise several hematophagous invertebrate species grouped in the orders Diptera, Hemiptera, Anoplura, and Siphonaptera. These species are responsible for the transmission of many infectious diseases such as dengue, chikungunya, Zika, and hence are of great importance to public health. Climate change, environmental modification by anthropogenic actions, disordered urban growth, the globalization of international exchange, and, more recently, the COVID-19 pandemic are some factors that have helped the emergence and dissemination of human infectious diseases transmitted by vectors. This Special Issue aims to bring together relevant works on these diseases, including the biology, taxonomy, systematics, ecology and behavior of their vectors, in order to better target surveillance and control strategies and, consequently, mitigate epidemics of these diseases.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.2 days after submission; acceptance to publication is undertaken in 3.7 days (median values for papers published in this journal in the second half of 2024).
