## Quantum Effects in General Relativity

### Message from the Guest Editor

This Special Issue will cover different aspects of quantum effects in general relativity. Understanding how to merge quantum mechanics and general relativity is one of the deepest problems in modern theoretical physics. The main issue is that Newton's constant, which fixes the strength of the gravitational interactions, is dimensionful. In that sense gravity according to Einstein is very different from other fundamental interactions whose strengths are fixed by dimensionless coupling constants. This leads to the well-known problem of the non-renormalizability of Einstein's theory, at least in perturbation theory. At this stage, it is not clear whether solving this problem will require expanding quantum physics or gravity or giving up the notion of point particles. One thus needs to remain open-minded and agnostic on how to resolve this fundamental problem. This Special Issue will present the state of the art in this field and is open to all approaches to quantum gravity. [...] For more information, please visit [link](#).

## About the Journal

### Message from the Editor-in-Chief

The multidisciplinary *Universe* journal is aiming to follow and, hopefully, to lead to the largest extent as possible the ever-self renovating threads which weave mathematical theories with our understanding of the magnificent natural world. On behalf of all the distinguished members of the editorial board, I extend my welcome to this new journal and look forward to hearing from the interested contributors and learning about their valuable research.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Astrophysics Data System, INSPIRE, CAPIus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Astronomy and Astrophysics) / CiteScore - Q2 (General Physics and Astronomy)
