

## Special Issue

# Advances in HIV Vaccine Development

### Message from the Guest Editor

Upon infection, HIV integrates into the host human genome and cannot be cleared with current treatments. Hence, sterile prevention—a high bar for vaccine development—remains of the utmost importance to halt virus spread and disease. HIV infection is also chronic, leading to the accumulation of enormous viral genetic diversity and multifaceted immune evasion, such as trimer packaging, glycan shield, conformational dynamics, and the immunodominance of non-neutralizing epitopes, to name a few on the HIV envelope glycoprotein. These properties render HIV one of the most difficult viruses for vaccine development. Although neutralizing epitopes have been mapped to almost the entire surface of the HIV envelope, broadly neutralizing antibodies present numerous challenging traits and have not been induced with current vaccines. In this Special Issue, all studies and reviews that shed new light on both prophylactic and therapeutic HIV vaccines are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Vaccines* (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.6 days after submission; acceptance to publication is undertaken in 3.3 days (median values for papers published in this journal in the first half of 2024).
