

Special Issue

Vaccines and Other Antibody Therapies Against Bacterial Infection

Message from the Guest Editor

Dear Colleagues Antibiotics are our primary defense against bacterial infections, but the emergence of antibiotic resistance bacteria has severely diminished the effectiveness of antibiotics therapies. Thus, a dire need exists for the discovery and development of non-antibiotic based bacterial infection treatments. This special issue will explore non-antibiotic treatments against bacterial infection by focusing on recent advances and problems in vaccines and other antibody based therapies against bacterial infection.

Guest Editor

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp

Department of Infectious Diseases, College of Veterinary Medicine,

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.6 days after submission; acceptance to publication is undertaken in 3.3 days (median values for papers published in this journal in the first half of 2024).
