

Special Issue

Viral Hepatitis in Latin America and the Caribbean

Message from the Guest Editors

Viral hepatitis is a major global concern, as it contributes to the toll of deaths from infectious diseases and cancer worldwide. The five main types of hepatitis (A, B, C, D, and E) vary in terms of their transmission routes, geographic distributions, and clinical outcomes. In the context of Latin America and the Caribbean, these infections have great public health relevance but scarce and limited data. To shed light on and provide new information about viral hepatitis in the context of Latin America and the Caribbean, new studies are required in order to provide data relevant to this highly diverse region. With this objective in mind, this Special Issue of *Viruses* will address the following topics: 1) genetic variations in viral hepatitis, which may aid us in understanding the diverse types of response (clinical outcomes, treatments, immunological factors); 2) general epidemiological studies and those focusing on key populations; and 3) new diagnostic procedures that will aid in the elimination of these viruses.

About the Journal

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Editor-in-Chief

Dr. Eric O. Freed

HIV Dynamics and Replication Program, Center for Cancer Research,
National Cancer Institute, Frederick, MD 21702-1201, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2024).
