Special Issue

Viruses versus Bacteria—Novel Approaches to Phage Therapy as a Tool against Multidrug-Resistant Pathogens

Message from the Guest Editor

In recent years, the problem of antibiotic resistance has become increasingly serious, threatening the health of human beings, animals and plants. Efficient and environmentally friendly phage therapy is expected to be a powerful approach to prevent and control the spread of pathogens in the fields of health care, food safety and ecological environment. *Viruses* is dedicated to providing a platform for the discussion of viruses and virus–host interactions, antibiotic-resistant pathogens and phage therapy. Its core purpose is to integrate researchers across the environment, public health, animal medicine, and food fields with common scientific objectives to explore the latest high-quality scientific knowledge on blocking the transmission of pathogens and reducing antimicrobial resistance by using phage therapy.

About the Journal

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Editor-in-Chief

Dr. Eric O. Freed
HIV Dynamics and Replication Program, Center for Cancer Research, National Cancer Institute, Frederick, MD 21702-1201, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2024).
