Studies on Water Resource and Environmental Policies

Message from the Guest Editors

There is a global consensus that a shortage of water resources restricts the sustainable development of economy and society. The consequent degradation of water environments and the destruction of water ecosystems have created unprecedented challenges for human living environments. Today, many factors, such as the uneven distribution of water resources, the low utilization efficiency of water resources, insufficient awareness around saving water, and insufficient resilience of water resource systems, have caused serious environmental problems. The sustainable use of water resources and environmental restoration have become the most important issues that every country must solve. Therefore, it is necessary to carry out further studies from the perspective of complex system analyses and to evaluate water resources to provide support for the formulation and implementation of environmental policies, as well as to promote the high-quality development of economic society. In this context, researchers are invited to contribute to this Special Issue entitled, “Studies on Water Resource and Environmental Policies”.

Guest Editors

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Water Science and Technology)
