

Special Issue

Advanced Oxidation Processes for Water and Wastewater Treatment

Message from the Guest Editors

The increasing demand for clean and safe water represents a major challenge for public health and economic development. Water scarcity, disinfection, the elimination of emerging contaminants, and the growing need for water reuse allied to the limited treatment capacity of conventional wastewater plants are major challenges that need to be properly addressed.

Advanced oxidation processes (AOPs) for water and wastewater treatment have received a great deal of attention in recent years. These processes are known for their capacity to mineralize a wide range of pollutants into CO₂ and H₂O. This Special Issue of *Water* is dedicated to the use of AOPs as an effective solution for the treatment (or a polishing step) of drinking water or urban/industrial wastewater treatment. Within this context, we would like to invite you to contribute to this Issue and to disseminate and share findings on water and wastewater treatment.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Water Science and Technology)
