

Special Issue

Decision-Making Theory and Methodology for Water, Energy and Food Security, 2nd Edition

Message from the Guest Editors

In recent years, the water–energy–food nexus has become an increasingly significant and active area of research in economic and management science. The safety of water, energy and food is another important problem. These problems can be considered as multi-criteria decision-making problems. However, there are few studies that consider these problems from the perspective of multi-criteria decision-making. Theories of decision-making are routinely based on the notion that decision-makers choose alternatives that align with their underlying preferences, and hence their preferences can be inferred from their choices. The aim of this Special Issue is to develop various decision-making theories and methodologies for water, energy and food, including the evaluation of water supply, wastewater management, energy, food risk management, safety management, etc.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Water Science and Technology)
