

Special Issue

Climate Change and Water, Sanitation and Hygiene (WASH): Resilience, Adaptation and Emissions

Message from the Guest Editor

This Special Edition of *Water* will address the range of impacts, adaptation, resilience and emissions on water and sanitation services associated with climate. It will cover all aspects of domestic water supply and faecal waste management and the associated needs for good personal and domestic hygiene. Papers covering all parts of the world are welcome, but we would particularly encourage studies from low- and middle-income countries. [Details on Climate Change and WASH](#)

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
