

## Special Issue

# Water-Induced Landslides: Prediction and Control

### Message from the Guest Editors

The topic of this Special Issue, "Water-Induced Landslides: Prediction and Control", will be of great interest for many practical and scientific reasons. In fact, in many countries, landslides represent one of the major natural threats for the security of people, infrastructure, lifelines, and economic activities. Water is a primary cause of landslides, which can occur owing to intense rainfall, snowmelt, changes in groundwater level in slopes, and changes in water level of water reservoirs at the base of natural or artificial slopes, and along coastlines. These triggered factors, along with the properties of the involved soils, considerably affect the mechanical processes that lead to slope failure and the subsequent movements of landslide mass in the post-failure phase. For example, prolonged and extremely-intense rainfall could cause catastrophic and fast movement of rock and soil masses. Therefore, water plays a critical role in the study of landslides and the water-slope interaction should be investigated in detail. ## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Water Science and Technology)
