

## Special Issue

# Research on Micropollutants in Urban Water

### Message from the Guest Editor

Micropollutants in urban water are a reality that constitute a major environmental concern. These chemicals can be active pharmaceutical ingredients (APIs), personal care products (PCPs), pesticides, or microplastics, among others, that come mostly from household sources. The development of techniques to detect and remove them has been the scope of many investigations worldwide, but there is still a long way to go in order for these techniques to become present in the daily routine of wastewater treatment plants. This Special Issue aims to encourage researchers working with these questions to publish their advances in this area and related topics, seeking progress in the field and implementation of practical solutions.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Water Science and Technology)
