Bringing Governance Back Home – Lessons for Local Government regarding Rapid Climate Action

Message from the Guest Editors

There is a growing recognition both that rapid action on climate change is urgently necessary, and that many of the responsibilities for this action (e.g., around transport, land use planning and economic development) rest at a local level. Responding to this emergency will require significant changes to the assumptions, expectations, priorities and procedures of locally elected representatives and government officials. This Special Issue will explore the responses of local government across the world to the need for rapid climate action. We are particularly interested in the lived experience of local politicians, officers and those engaging with them in adapting to this challenge and driving the response. While questions of technical solutions and policy design for rapid climate action have been well studied, little attention has been paid to the crucial question of how such outcomes might be implemented, by whom, and how action is enabled or constrained by the institutional and other sociotechnical relations in which these actors are embedded.* This is a Sustainability/World Joint Special Issue.
